Uncharted Waters

Mapping the strangeness of the
most common liquid on Earth

Speaker

Dr Fausto Martelli

When we think about life, we think about water. But why is water able to sustain life, and other liquids aren't? What do we really know about water?

In this talk, Dr Fausto Martelli will take us on a journey through the history of scientific explorations that led to the discovery of many of water's unique anomalies. In doing so, he will reveal some of its most remarkable and unconventional behaviours which directly affect our daily lives without us even noticing it.

★ **TICKETS £5 (Students £2)** ★

Refreshments provided – donations will be gratefully received
